

# DPIA Module

Data Protection Impact Assessment — Configurable Approval Workflow  
· Complete Audit Trail

8-Stage Pipeline

⚙️ Admin-Configurable

🔒 Admin Approval Gates

📋 Full Audit Trail

📊 Executive Report

## 1 · What is the DPIA Module?

Identify, document and manage privacy risks of every processing activity handling personal / student data before it goes live.

The DPIA module lives inside the Admin Portal under the  **DPIA** tab and follows the stage-gated, document-then-approve pattern recommended by GDPR Art. 35 and aligned with the India DPDP Act principles.

**Key capability:** the approval pipeline is **not hard-coded** — it is fully configurable by an administrator. Rename stages, reorder, add/remove gates, require comments, and restrict steps to admins.

# Live — DPIA Reporting & Dashboard

Portfolio KPIs, status by business unit, data categories and risk breakdown — with the DPIA registry below.

## 2 · The Default Approval Workflow (8 Stages)

Every stage is colour-coded and shown as a live stepper so staff always see exactly where a DPIA stands.

### 3 · Transition & Governance Rules

Transitions are validated against the configured workflow — you cannot jump stages that aren't permitted.

| From                   | To              | Action                               | Comment? | Admin? |
|------------------------|-----------------|--------------------------------------|----------|--------|
| Draft                  | Assessment      | Start Assessment                     | -        | -      |
| Assessment             | Draft           | Send Back to Draft                   | ✓        | -      |
| Assessment             | Review          | Submit for Review                    | -        | -      |
| Review                 | Risk Treatment  | Approve Review                       | -        | -      |
| Risk Treatment         | Privacy Review  | Complete Risk Treatment              | -        | -      |
| Privacy Review         | Approval        | Submit for Approval                  | -        | -      |
| <b>Approval</b>        | Active          | <b>Approve &amp; Activate</b>        | ✓        | ✓      |
| <b>Approval</b>        | Privacy Review  | <b>Reject — Return for Revisions</b> | ✓        | ✓      |
| Active                 | Periodic Review | Start Periodic Review                | -        | -      |
| <b>Periodic Review</b> | Active          | <b>Re-confirm &amp; Reactivate</b>   | ✓        | ✓      |
| Periodic Review        | Assessment      | Trigger Re-assessment                | ✓        | -      |

- **Approval → Active** is restricted to **admins** and **requires a comment**.
- **Rejection** returns the DPIA to Privacy Review — there is no shortcut straight back to Active.
- **No route from Privacy Review to Active** — the Approval gate cannot be skipped.

Expanded DPIA showing the stage-gated stepper, advance buttons, privacy risks and the full audit trail with dates, usernames and comments.

## 4 · Complete Audit Trail

Every action is written to a dedicated audit log and shown in the DPIA detail panel.

|       |                                                                                            |
|-------|--------------------------------------------------------------------------------------------|
| Who   | Username that performed the action                                                         |
| What  | <div>created updated stage_changed approved rejected risk_added risk_updated deleted</div> |
| Where | from_stage → to_stage (colour-coded)                                                       |
| When  | Timestamp of the change                                                                    |
| Why   | Mandatory comment on gated transitions                                                     |
| Meta  | Transition label used, risk counts, file metadata                                          |

Every approval, rejection, and stage move is traceable — you can always reconstruct **who approved a DPIA and why**.

## 5 · Admin-Configurable Workflow () Editor)

Only administrators can modify the pipeline — a server-side admin permission protects the editor.

### Stage management

Re-order, add, or remove stages — edit labels and colours live.

### Transition rules

Define allowed from → to moves; mark each as *comment required* and/or *admin only*.

### Reset to defaults

One click restores the standard 8-stage pipeline.

### Immediate effect

Changes persist and drive the stepper, transitions, dashboard pipeline counts, and the executive report.

# Live — Admin-Configurable Workflow Editor

The ⚙️ Workflow screen lets an admin rename & recolour stages, reorder them, and define every transition with Comment and Admin-only rules, plus one-click Reset to Defaults.

# Live — DPIA Form

The New/Edit DPIA form captures title, business unit, workflow stage, risk level, dates, data categories, third-party flag and per-risk remediation.

# 6 · Dashboard & Executive Report

Live oversight of the whole DPIA portfolio.

## Admin Dashboard (DPIA tab)

- Total DPIAs · Completed / Open
- High-risk activities · Open / Overdue risks
- Third-party processing · Data categories
- Workflow pipeline stage counts
- Status by business unit · Risk breakdown

## Executive Report (downloadable)

- Portfolio totals & completion status
- **Workflow Pipeline** — DPIAs per stage in order
- Status by business unit
- Top open high / critical risks

# 7 · Privacy Risk Assessment (built-in)

Each DPIA carries multiple privacy risks with full remediation tracking.

|                      |                                                                          |
|----------------------|--------------------------------------------------------------------------|
| Description          | What the risk is                                                         |
| Likelihood / Impact  | Rated scales                                                             |
| Risk level           | Computed low / medium / high / critical                                  |
| Status + remediation | open / mitigating / resolved, with plan & due date                       |
| Oversight            | Open / overdue risks surface on the dashboard so they can't be forgotten |

Data categories captured per DPIA include: Student Records, Academic Results, Aadhaar Data, Mobile Numbers, Biometric Data, Health Records, Financial Data, HR Employee Data, CCTV / Surveillance, IoT / Sensors, Campus Access and Online Services.

## 8 · Technical Implementation

Governance rules are enforced server-side, not just hidden in the UI.

|                           |                                                                                                                            |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------|
| <b>Database</b>           | dpia_assessments · dpia_risks · dpia_audit_log (CASCADE) · dpia_workflow_config (JSONB)                                    |
| <b>Backend API</b>        | /api/dpia (CRUD) · /api/dpia/:id/transition · /api/dpia/workflow (GET/PUT, admin) · /api/dpia/dashboard · /api/dpia/report |
| <b>Frontend</b>           | React admin section — stepper, transition buttons, audit trail, workflow editor                                            |
| <b>Security</b>           | Admin gates & required comments validated on the server; permission-scoped (dpia / admin)                                  |
| <b>Config persistence</b> | Workflow stored in JSONB; invalid / removed transitions fall back to safe defaults                                         |

## 9 · Live Demo Script (2 minutes)

Walkthrough in the Admin Portal.

1. Open **Admin Portal** →  **DPIA** (admin login).
2. Click **+ New DPIA** — fill title, pick data categories, add one risk, save.
3. Show the **stepper** — the DPIA is in *Draft*.
4. Click through **Start Assessment** → **Submit for Review** → **Approve Review** → **Complete Risk Treatment** → **Submit for Approval**.
5. At **Approval**, demonstrate the gate — show a comment is **required** before **Approve & Activate** goes through.
6. Expand the DPIA — scroll the **Audit Trail**: every step, who did it, when, and the approval comment.
7. Open  **Workflow** — show stages are editable, then **Reset to Defaults**.
8. Click **View Report** — point to the **Workflow Pipeline** section.
9. (Optional) Reject a DPIA at Approval → show it returns to **Privacy Review**.
